

What is claimed is:

1. A portable watch, comprising:

a case band provided with a pipe-attachment hole including a female screw section;

a winding stem pipe attached to the case band after going through the pipe-attachment hole, including a first male screw section to be screwed together with the female screw section in a removable manner, an intracase-band end section provided with a screw section being a reverse screw for the first male screw section, and an extracase-band end section including a second male screw section and abutting to an outer surface of the case band;

a clamp ring screwed together with the screw section of the intracase-band end section in a removable manner, sandwiching the case band with the extracase-band end section;

a waterproof gasket sandwiched between the case band and the winding stem pipe; and

a crown including a crown main section formed with a female screw section to be screwed together with the second male screw section in a removable manner.

2. A portable watch according to claim 1, wherein an outer diameter of the screw section of the intracase-band end section is formed to be smaller than an outer diameter of the first male screw section.

3. A portable watch according to claim 1, wherein the

clamp ring is a square nut.

4. A portable watch according to claim 1, wherein the extracase-band end section includes an engagement section to be engaged with a tool rotating the winding stem pipe.

5. The portable watch according to claim 4, wherein the engagement section is formed by a square hole opening toward an end plane of the extracase-band end section.

6. The portable watch according to claim 4, wherein the engagement section is forming a polygon exposing to an outer rim plane of the extracase-band end section.
